

ABSTRACT OF THE DISCLOSURE

A laser scanning apparatus, including: a laser light source; a rotary polygon mirror for deflecting a laser beam emitted from the laser light source for 5 scanning; an imaging optical system for focusing the laser beam deflected by the rotary polygon mirror into an image; a containing member for containing the rotary polygon mirror and the imaging optical system; a first conductive cover member for closing a first 10 opening portion of the containing member; a second conductive cover member for closing a second opening portion of the containing member; and conductive connection members for electrically connecting between the first conductive cover member and the 15 second conductive cover member.
